

MARCO ARAUJO

FULLSTACK SOFTWARE ENGINEER

Rio de Janeiro, Brazil | marcoaraujoneves@gmail.com | [LinkedIn](#)

PROFESSIONAL SUMMARY

Software engineer who takes SaaS products from zero to one, executes stack migrations, and optimizes software for performance.

Over nearly five years at EasyRetro, I built multi-tenant apps, launched MVPs, and shipped enterprise-focused features. At Form Factory, I drove deep architectural and quality improvements, modernizing the customer hub for a major US clothing brand and optimizing site performance from poor metrics to robust scores.

I work across the full stack, focusing on system reliability and maintainability, and on applying practical industry standards to deliver solid products.

TECHNICAL SKILLS

- | | | | |
|------------|---------------------------|---------------------|----------------------------|
| • React | • Vue | • TypeScript | • Javascript |
| • Node.js | • Remix.js / React Router | • React Native | • PostgreSQL |
| • Firebase | • Shopify Hydrogen | • SaaS & E-commerce | • Performance Optimization |

EXPERIENCE

Software Engineer, Form Factory

Jan 2025 to Sept 2026

California, United States - Remote

- Led a performance optimization program to raise Lighthouse and Core Web Vitals to production standards, reducing page load times and user-perceived speed.
- Rebuilt the Customer Hub for a major US clothing brand, integrated a new loyalty provider, and delivered account management, orders, and customer support components and server endpoints to improve maintainability and feature usability.
- Delivered Search & Discovery integrations and upgraded analytics and observability; used production telemetry to identify conversion blockers and prioritize fixes.
- Stabilized the platform to reliably support high-traffic peak seasons, improving user experience and conversion across the customer journey.
- Worked as Forward Deployed, managing the codebase, services, and deployments, and reporting directly to clients from leading US companies weekly, translating technical needs into business terms for stakeholders.

Software Engineer, EasyRetro

Aug 2020 to Feb 2025

Brazil - Remote

- Managed end-to-end product development across multiple SaaS applications, including EasyRetro, Slideasy, and PlanITPoker, handling everything from feature planning to release.
- Built Slideasy from scratch to MVP launch and led the technical migration of PlanITPoker to a new stack while transitioning the product from free to paid.
- Developed core features, including real-time collaboration tools, integrations, and data export capabilities designed to retain enterprise customers.
- Async remote work which required effective communication and reporting to ensure smooth progress.

Fullstack Developer , Satélite Norte - Freelance**May 2020 to Aug 2020**

Brazil - Remote

- Engineered an audit platform deployed across hundreds of regional agencies, standardizing inspection flows and centralizing results for enterprise reporting.
- Built three distinct frontends (agency, auditor, back-office) with React and React Native, backed by a unified Node.js + PostgreSQL REST API to ensure consistent UX and data integrity.
- Enabled centralized decision-making by integrating audit results, demands, and rankings into a single application used for operations and planning.

IT Intern / Intern Software Engineer, Rio de Janeiro State University**Mar 2019 to Feb 2021**

Nova Friburgo, Brazil

- Developed a climate-monitoring mobile app with Ionic and a Java REST API, supporting multiple languages, stations, and sensor types for scalable monitoring.
- Designed the system to support the community and authorities in disaster prevention, enabling alerting through individualized sensor setup.
- Deployed the app to the Google Play Store and earned a project Registration certificate.

Junior Project Manager & Engineer, Serra Jr. Engenharia**Oct 2017 to Mar 2020**

Nova Friburgo, Brazil

- Worked at a university junior company under the mentorship of experienced staff and Ph.D. professors, gaining practical project experience during my bachelor's degree.
- Managed backlogs, client requirements, and engineering teams to deliver web applications using Angular, PHP, and JavaScript.
- Led development and delivery of multiple client-facing responsive web apps, improving speed and client satisfaction.
- Designed and built an industrial IoT solution with Arduino and C++ to automate production temperature control.

EDUCATION**Rio de Janeiro State University, Nova Friburgo, Brazil****Jan 2016 to Jul 2021**

Computer Engineering

Bachelor's degree in Computer Engineering with a strong STEM foundation: algorithms, databases, data structures, computer architecture, differential equations, and physics. Specialized coursework and practical exposure to software engineering and machine learning concepts (regression models, perceptron, neural networks, stochastic methods).

Escola Técnica de São Paulo, São Paulo, Brazil**Jan 2014 to Dec 2014**

Programming Assistant

Technical education on software development, covering a wide range of subjects, e.g. system analysis, databases (SQL), web development (Javascript and PHP), and desktop software development (Java and C#).

LICENSES & CERTIFICATIONS

Introduction to Agent Skills, Anthropic	May 2026
Introduction to Model Context Protocol, Anthropic	May 2026
Claude with the Anthropic API, Anthropic	May 2026
Claude Code in Action, Anthropic	May 2026
Solution Planning Fundamentals: Verified Skill Badge, Shopify	Dec 2025
Fundamentals of Deep Learning for Computer Vision, NVIDIA	Sept 2019
FullStack Web Development, University of Helsinki	Jan 2020
